

Installing Dropbox onto a Windows Computer

1 Download and open installer

Open your preferred web browser (e.g. Internet Explorer, Firefox, Google Chrome, etc.) and navigate to www.dropbox.com.

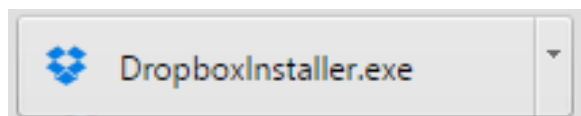

When the page has loaded select the “Download the app” link in the top right corner of the window.

The DropBox homepage

This will take you to the download page. The Dropbox installer should automatically download, if not follow the on screen instructions.

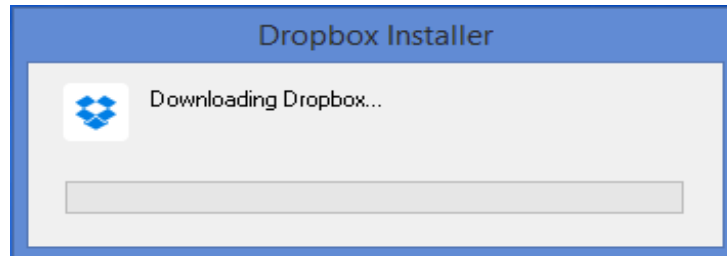

Once the download has finished open the installer from within your browser.

As it will appear in Google Chrome

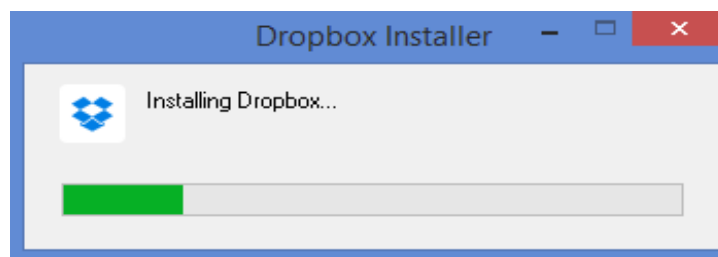

2 Run Installer and Log in to Dropbox

By opening the file the installation will start automatically. You should see a window open and start downloading Dropbox.

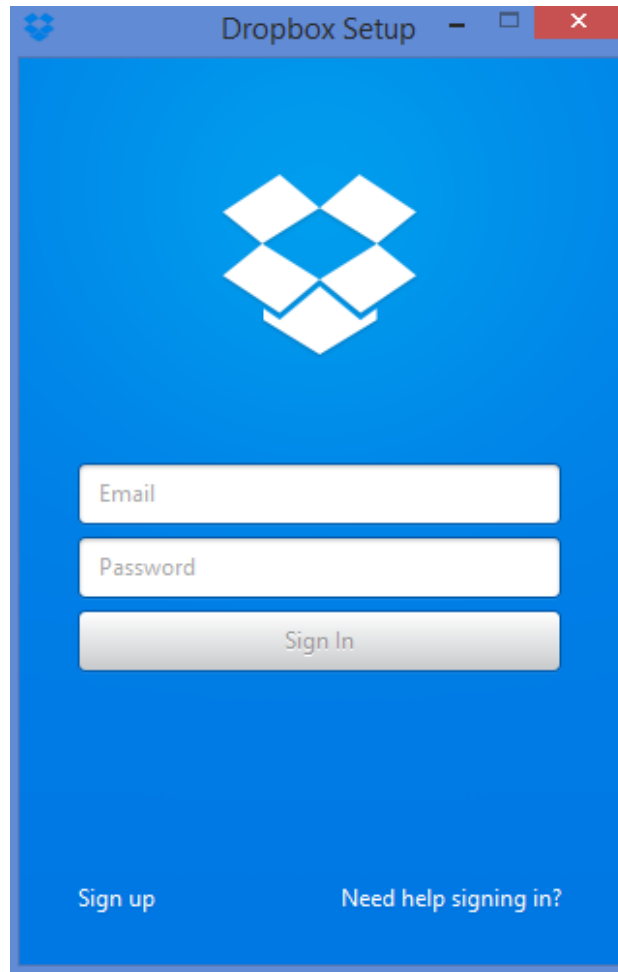

DropBox downloader window

Let the download run until it has finished. At this point the Installer will start to install Dropbox onto your computer.

DropBox installer window

Once the installation has finished Dropbox will ask you to enter your login details. These are the email address and password that you have registered with Dropbox.

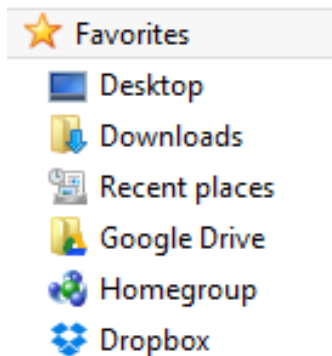

Dropbox sign in window

Enter your details and select "Sign In".

3 Use Dropbox

You have now installed and logged into Dropbox and it is available to use from your computer. Dropbox will now appear as a folder on your computer.

Dropbox under favourites in Windows Explorer

Any files that you have on Dropbox will be downloaded onto your computer. Any files that you wish to upload to your Dropbox folder can simply be copied or saved into this folder and Dropbox will sync them with their online folders.
